

Use Cases

- appy one fix to main
- Rescue 1 commit to stale branch
- fix committed to wrong branch

Disadvantages

- duplicate commits
- history diverges
- missed dependent commits

Preview Changes

`git clean -n`

→ lists files that would be deleted w/out deleting anything

Remove untracked files

git clean -f

-> deletes untracked files in directory
required by default

Remove untracked directories

git clean -fd

-> also removes untracked directory

Interactively removes files

git clean -i

-> opens menu where you select what gets deleted

Remove ignored files

git clean -fX

- use capital X
- removes files only in .gitignore
